CALL **FOR** PAPERS

In the context of the Urban Co-Creation Data Lab project, a workshop on urban analytics to address cities' challenges is being organized to be held next July in Lisbon.

The main goal of this workshop is to share knowledge and best practices on urban analytics in these research areas. In this workshop the analytical models developed and deployed in Lisbon, and tested in two EU cities, will be presented. If you are a researcher working in one or more of these five areas, we invite you to submit a paper to be presented in this workshop.

Travelling and accommodation costs for the papers selected by the workshop scientific committee for presentation will be covered by Urban Co-Creation Data Lab project.

The Urban Co-Creation Data Lab project aims to provide support on decision making at the city level on high-quality services for citizens in five city domains, namely:

MICROMOBILITY

01

by supporting new planning and management approaches altogether with new tools to evaluate impact and predict micromobility services demand

WASTE MANAGEMENT

02

by identifying profiles/patterns and predicting of urban waste production

PARKING

03

by anticipating the occurrence of abusive parking to optimize surveillance

POLLUTION

04

by developing simulation models of liquid and air pollutants propagation

EMERGENCY

05

by exploring the causes and creating predictive models that could predict emergency occurrences
